SUMMARY

Java Backend Developer with experience in building and maintaining backend services for data governance and security platforms. Skilled in Java, Spring Boot, REST APIs, SQL, and cloud data platforms like Snowflake and Databricks. Experience in policy enforcement, data security, and system integrations. Strong understanding of backend architecture, APIs, and database design.

SKILLS

Programming Languages & Frameworks:

- Java (Core & Advanced), Spring Boot, Python

Frontend Development:

- HTML, CSS

Back-end Development:

- Spring Boot, Spring MVC

Databases & Cloud:

- MySQL, PostgreSQL, Snowflake, Databricks, AWS

Tools:

- Git, Gitlab, Github, Maven, Docker, Linux, Jira

Concepts:

- REST APIs, Microservices, Data Governance, Access Control, Encryption, System Design, Policy Enforcement, Data Masking

Soft Skills:

- Problem-Solving, Team Collaboration, Leadership, Agile & Scrum

ACHIEVEMENTS

CERTIFICATIONS

1. **Advanced Data Structures and Algorithms (DSA)**
2. **Full Stack Web Development with Java - Udemy**

EDUCATION

Pune Vidyarthi Griha's College of Engineering & Shrikrushna S. Dhamankar Institute of Management, Nashik — *Bachelor of Engineering*
June 2021 - June 2025
Artificial Intelligence & Data Science

EXPERIENCE / INTERNSHIP

1. **Privacera India Pvt. Ltd. - Java Developer Intern**
   Nov 2025 - Present
   - Designed and developed REST APIs for policy management and data access control workflows.
   - Worked on Snowflake and Databricks integrations to enforce data masking and access policies.
   - Collaborated with data engineering and security teams to uptake Java Versions. To Upgrade Java runtime Versions.
   - Debugged and optimized backend services to improve policy enforcement performance.

2. **Infosys Spring Board, ONLINE- Java Developer**
   Nov 2024 - Feb2025
   - Assisting in designing and developing backend components using Java and Spring Boot, focusing on building RESTful APIs, integrating databases, and supporting application logic to enhance system performance and maintainability in enterprise-level online Shopping applications.

PROJECTS

1. Blockchain Based Supply Chain Management System

- Developed a blockchain-based supply chain system to track product movement and ensure data transparency, immutability, and secure transaction logging.
- Implemented smart contract logic and backend services to manage product records, ownership transfer, and supply chain verification.

2. Online Shopping Web Application

- Built a full-stack online shopping application with product catalog, cart, order management, and user authentication using Java/Spring Boot and SQL.
- Developed REST APIs for product management, order processing, and user operations with database integration.
